CBSE Class 10 English (Language and Literature) Question Paper 2022

Set – 1 2/1/1 Solutions

SECTION A **(*10 marks*)**

Reading

1. Read the passage given below:

Sifting through the sands of time

1. When you're on the beach, you're stepping on ancient mountains, skeletons of marine animals, and even tiny diamonds. Sand provides a mineral treasure- trove, a record of geology's earth-changing processes.

2. Sand: as children we play on it and as adults we relax on it. It is something we complain about when it gets in our food, and praise when it's moulded into castes. But we don't often look at it. If we did, we would discover an account of a geological past and a history of marine life that goes back thousands and, in some cases, millions of years.

3. Sand covers not just sea shores, but also ocean beds, deserts and mountains. It is one of the most common substances on Earth. And it is a major element in man-made items too concrete is largely sand, while glass is made of little else.

4. What exactly is sand? Well, it is larger than fine dust and smaller than shingle. Depending on its age and origin, a particular sand can consist of tiny pebbles or porous granules. Its grain may have the shape of stars or spirals, their edges jagged or smooth. They have come from the erosion of rocks, from the skeletons of marine organisms which accumulate on the bottom of the oceans, or even from volcanic eruptions.

5. Colour is another clue to sand's origins. If it is dazzling white, its grains may be derived from nearby coral outcrops, from crystalline quartz rocks or from gypsum. On Pacific islands jet jet-black sands form from volcanic minerals.

6. Usually, the older the granules, the finer they are and the smoother the edges. The fine, white beaches, for instance, are recycled from sandstone several hundred million years old. Perhaps they will be stone once more, in another few hundred million.

7. Sand is an irreplaceable industrial ingredient whose uses are legion: but it has one vital function you might never even notice. Sand cushions our land from the sea's impact, and geologists say it often does a better job of protecting our shores than the most advanced coastal technology.

On the basis of your understanding of the passage, answer any *five questions* from the six given below: ***(5 X 1=5 Marks)***

(i) How is sand a 'treasure trove'?

Ans: Sand is a 'treasure trove' because it holds a record of geology's earth-changing processes and a history of marine life that spans thousands to millions of years.

(ii) How is sand both a pain and a pleasure?

Ans: Sand is a pain when it gets into our food, but it is a pleasure when we play on it as children or relax on it as adults, and also when it is moulded into castles.

(iii) Name two man-made materials that contain sand.

Ans: Two man-made materials that contain sand are concrete and glass.

(iv) List the different shapes of sand.

Ans: The different shapes of sand grains can include stars or spirals, and their edges can be jagged or smooth.

(v) What is the origin of white sand?

Ans: White sand may originate from nearby coral outcrops, crystalline quartz rocks, or gypsum.

(vi) In what ways are older granules different from recent granules?

Ans: Older granules are generally finer and have smoother edges compared to recent granules.

2. Read the passage given below:

Extraction And Purification Of Drinking Water

1. Some consumers choose to purchase bottled drinking water, rather than relying on city tap water supplies. Bottled water has typically been extracted from underground sources. If water exists underground, but has no natural exit points, bottling companies may construct a water table well by drilling down to extract water from an unconfined aquifer. This is done when the Earth's natural water level - known as a water table - is much lower than the Earth's surface. In some cases, as with a valley or gully on a mountain, the level of the spring can emerge. Bottling companies are permitted to extract this water from a hole drilled into the underground spring, but the composition of the water must be identical to that of the naturally surfacing variety nearby.

2. Artesian water is drawn from a confined aquifer, a deep underground cavity of porous rock that holds water and bears pressure from a confining layer above it. This water can be accessed if companies drill a vertical channel down into the confined aquifer. Due to the pressurised nature of this aquifer, water will often rise up from within it and form a flowing artesian well, which appears as an explosive fountain at the Earth's surface. However, this only occurs when the surface is lower than the natural water table. If the surface is not lower than the natural water table, it is still possible to draw artesian water by using an extraction pump.

3. Some bottled water is advertised as ‘purified, which means it has been subjected to a variety of cleansing processes. A common filtering procedure, known as reverse osmosis, involves the water being pressed through microscopic membranes that prevent larger contaminants from passing through. The microscopic size of these holes is such that they can even obstruct germs, but they are most effective against undesirable materials such as salt, nitrates and limescale. One disadvantage of reverse osmosis is that a lot of unusable water is generated as a by-product of the procedure; this must be thrown away.

4. For treating pathogens, an impressive newer option is ultraviolet (UV) light. Powerful UV light has natural antibacterial qualities, so this process simply requires water to be subjected to a sufficient strength of UV light as it passes through a treatment chamber. The light neutralises many harmful germs by removing their DNA, thereby impeding their ability to replicate. A particularly impressive quality of UV light is its ability to neutralise highly resistant viral agents such as hepatitis.

5. The overall effects of UV light treatment are variable, however, which leaves many municipal water treatment processes relying on chlorination. Its powerful and comprehensive antimicrobial effect notwithstanding, chlorination is also extremely inexpensive and remains the only antimicrobial treatment capable of ensuring water remains contaminant-free all the way through the pipes and to the taps of domestic homes. Many members of the public remain suspicious of water that has been treated with such a harsh chemical. Its ease of use and affordability have meant that chlorine often plays an important role in making tainted water supplies safe for consumption immediately after natural disasters have occurred.

On the basis of your understanding of the passage, answer any *five* questions from the six given below: ***(5x1=5 Marks)***

(i) Under what conditions does a natural spring emerge?

Ans: A natural spring emerges when the Earth's natural water level, known as a water table, is lower than the Earth's surface, such as in a valley or gully on a mountain.

(ii) What is a confined aquifer?

Ans: A confined aquifer is a deep underground cavity of porous rock that holds water and bears pressure from a confining layer above it.

(iii) What forms a flowing artesian well?

Ans: A flowing artesian well forms when the water rises from a confined aquifer due to the pressurised nature of the aquifer and the surface being lower than the natural water table, appearing as an explosive fountain at the Earth's surface.

(iv) Explain the term 'purified' water.

Ans: 'Purified' water refers to water that has been subjected to a variety of cleansing processes to remove contaminants. One common filtering procedure is reverse osmosis, where water is pressed through microscopic membranes that prevent larger contaminants from passing through.

(v) How are pathogens treated?

Ans: Pathogens are treated by exposing the water to powerful ultraviolet (UV) light, which neutralises harmful germs by removing their DNA, thereby impeding their ability to replicate.

(vi) Why is municipal water treated by chlorination?

Ans: Municipal water is treated by chlorination because it is an extremely inexpensive and powerful antimicrobial treatment that ensures water remains contaminant-free all the way through the pipes to the taps of domestic homes. Chlorination is also useful for making tainted water supplies safe for consumption immediately after natural disasters.

SECTION B

Writing and Grammar ***10 marks***

3. Attempt any*one* from (i) and (ii).

(i) You are Rita/Rahul and you came across the following information on your local club notice board.

Better Living
How to tackle stress, build concentration and remain fit and healthy - Yoga, a way of life - Join a free yoga camp for students.

You wish to enrol but require more information. Write a letter to the Yoga Institute, M.G. Road, Pune, enquiring about details of timing, batch size, eligibility, etc. for joining the course. **(*5 Marks)***

The Director
Yoga Institute
M.G. Road
Pune

Subject: Enquiry Regarding Free Yoga Camp for Students

Dear Sir/Madam,

I recently came across a notice on our local club board about the free yoga camp being organised by your esteemed institute. I am very interested in enrolling in this camp to learn how to tackle stress, build concentration, and maintain overall fitness and health.

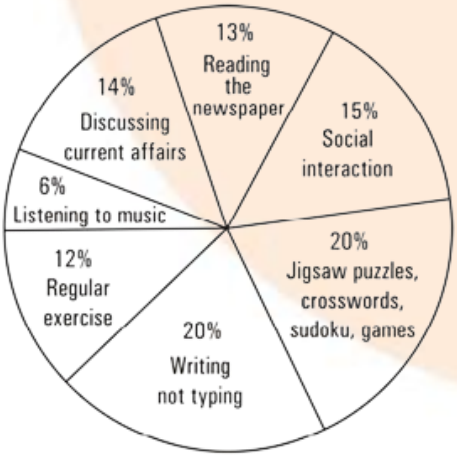
To make an informed decision, I would like to request the following details: What are the daily timings of the camp, and does it include weekends? How many students are accommodated in each batch? Are there any specific eligibility criteria or age restrictions for participants? How long is the camp, and what are the start and end dates? What steps do I need to follow to register for the camp? Are there any specific facilities or materials that participants need to bring along, or will they be provided by the institute? I am eager to join and benefit from the camp, and I would appreciate it if you could provide me with the above information at your earliest convenience.

Thank you for your attention and assistance.

Yours sincerely,
Rahul Sharma

(ii) The Internet provides every information one seeks at the click of a button. As a result children today are living in a comfort zone. According to research, this will result in long-term consequences which will affect their brain. Based on the following chart, write an analytical paragraph in not more than 120 words on activities to improve brain power

(5 Marks)



Activities to stimulate Brain Power

The provided chart illustrates various activities that stimulate brain power. Engaging in jigsaw puzzles, crosswords, sudoku, and other games occupies the highest percentage at 20%,

emphasizing their significant role in enhancing cognitive skills. Writing, not typing, also accounts for 20%, suggesting the benefits of manual writing in brain stimulation. Social interaction follows at 15%, highlighting the importance of human connections. Reading the newspaper (13%) and discussing current affairs (14%) show the value of staying informed and engaging in intellectual discussions. Regular exercise, constituting 12%, underscores physical activity's role in mental well-being. Lastly, listening to music at 6% indicates its soothing and cognitive benefits. These activities collectively counter the detrimental effects of excessive internet usage, fostering a more active and engaged brain.

For the Visually Impaired Candidates only (in lieu of Q. No. 3(ii)):

(ii) Read the following report and write an analytical paragraph based on it in 100 120 words: ***(5 Marks)***

According to a study, playing all sorts of brain games at home for fun boosts memory, thinking speed, and other cognitive skills. A research suggests that using paper and pencil especially for older people engages the brain and enhances memory in many more ways than using a keyboard.

Ans: A recent study highlights the cognitive benefits of playing brain games at home. These activities are enjoyed for fun and significantly improve memory, thinking speed, and various other mental skills. Research further emphasises that using paper and pencil, particularly for older adults, engages the brain more effectively than using a keyboard. This traditional method enhances memory and cognitive function in multiple ways. The tactile feedback and manual effort in writing stimulate brain activity and improve retention and recall. Overall, incorporating brain games and manual writing into daily routines can enhance mental agility and cognitive health, countering the passive effects of modern digital conveniences.

4. The following paragraph has not been edited. There is *one error* in each line. Identify the error and write its correction against the correct blank number. Remember to underline the correction. The first one has been done for you. ***(3x1=3)***

	Error	*Correction*
While the worst for COVID-19 in India	**(e.g.) for**	**of**
seems to be over, one may remain	**(a) _____**	**_____**
vigilant and response quickly to	**(b) _____**	**_____**
any future spike of cases.	**(c) _____**	**_____**

Ans:

	Error	*Correction*
While the worst for COVID-19 in India	(e.g.) for	of
seems to be over, one may remain	(a) No error	
vigilant and response quickly to	(b) Response	Respond
any future spike of cases.	(c) future	Further

5. Read the conversation below and complete the passage that follows: (*2x1=2*)

Rahul: **It is difficult to fight against peer pressure. Youths easily get influenced by the lifestyle of their peers.**

Radhika: **Peer pressure has its benefits as well. Our peers also motivate and inspire us to do better and work hard.**

Rahul said that it was difficult to fight against peer pressure as (a) _____ . Radhika replied that peer pressure had its benefits as well it (b) _____ .

Ans: (a) youths easily get influenced by the lifestyle of their peers.

(b) also motivates and inspires us to do better and work hard.

SECTION C

Literature ***20 marks***

6. Answer any *six* questions in 30-40 words each: ***(6x2=12)***

(i) How, according to Buddha, can one obtain peace of mind? (The Sermon at Benares)

Ans: According to Buddha in "The Sermon at Benares," one can obtain peace of mind by eliminating desires and cravings, which are the root causes of suffering.

(ii) "Don't bite your nails, Amanda!

"Don't hunch your shoulders, Amanda!

What does this reflect about Amanda's mother and Amanda?

Ans: "Don't bite your nails, Amanda! Don't hunch your shoulders, Amanda!" reflects Amanda's mother's concern for her daughter's habits and posture, showing her attentiveness and desire for Amanda to present herself well.

(iii) Walt Whitman in 'Animals' shows his Preference for living with animals. Justify.

Ans: Walt Whitman in 'Animals' shows his preference for living with animals because he finds them pure, honest, and free from societal complexities. He appreciates their companionship and natural behaviour.

(iv) Write a brief character sketch of Lomov. (The Proposal)

Ans: Lomov in "The Proposal" is portrayed as a hypochondriac landowner who is overly concerned with property disputes and health issues. He is portrayed as nervous, argumentative, and prone to overreacting.

(v) What are the essential qualities for becoming a scientist, according to Ebright's teacher? (The Making of a Scientist)

Ans: According to Ebright's teacher in "The Making of a Scientist," essential qualities for becoming a scientist include curiosity, determination, patience, and the ability to think critically and analytically.

(vi) Describe the feelings of the young lawyer when he came to know the reality of the hack driver.

Ans: The young lawyer in "The Hack Driver" feels a mix of shock, disbelief, and humiliation upon realizing that his search for John A. Pescud has led him back to the same hack driver who had been telling him stories during their earlier ride.

(vii) What attracts visitors to Coorg? (Glimpses of India)

Ans: Visitors are attracted to Coorg for its scenic beauty, including lush coffee plantations, misty hills, waterfalls like Abbey Falls, and opportunities for trekking and birdwatching.

7. Answer any *two* of the following in about 120 words each: ***(2x4=8)***

(i) Matilda realised that one little act of negligence can lead to total ruin. What do you learn from this and how would you move on in life? (The Necklace)

Ans: From Matilda's story in "The Necklace," we learn the profound lesson that small mistakes can have big consequences. Even a tiny act of carelessness can lead to significant hardships. In life, it's crucial to be mindful and responsible in every action, no matter how small it may seem. Moving forward, I would prioritize attention to detail and value what I have, avoiding unnecessary risks or desires that could lead to unexpected troubles. Learning from Matilda's experience, I would focus on gratitude and careful decision-making to prevent unnecessary hardships in my own life.

(ii) Imagine you are Bholi and you have been invited to give a speech on the importance of girl's education. Write the speech on 'Girl Education and Empowerment.'

Good morning everyone,

I am Bholi, and I am honoured to speak about the importance of girls' education. Education is a powerful tool that can transform lives. For girls, it means more than just learning to read and write. It means gaining confidence, making informed choices, and building a better future.

When girls are educated, they can achieve their dreams, contribute to their families, and help their communities grow. Educated girls become strong women who can stand up for their rights and inspire others.

Let us support and encourage girls' education so that every girl can reach her full potential and create a brighter, more equal world.

Thank you.

(iii) Valli was a mature girl and ahead of her age. Justify the statement with evidence from the text. (Madam Rides the Bus)

Ans: In "Madam Rides the Bus," Valli demonstrates maturity beyond her years in several ways. She meticulously plans her bus journey by saving money and gathering information about the trip. Despite being just eight years old, she refrains from spending her money on toys and treats, showing self-control and determination. During the bus ride, she behaves sensibly and confidently, insisting on paying her fare and sitting by herself. Additionally, when she sees a dead cow on the road, she feels deep sadness, indicating her ability to empathize and understand life's harsh realities. These instances highlight Valli's maturity and her keen sense of responsibility.
